Job openings by category

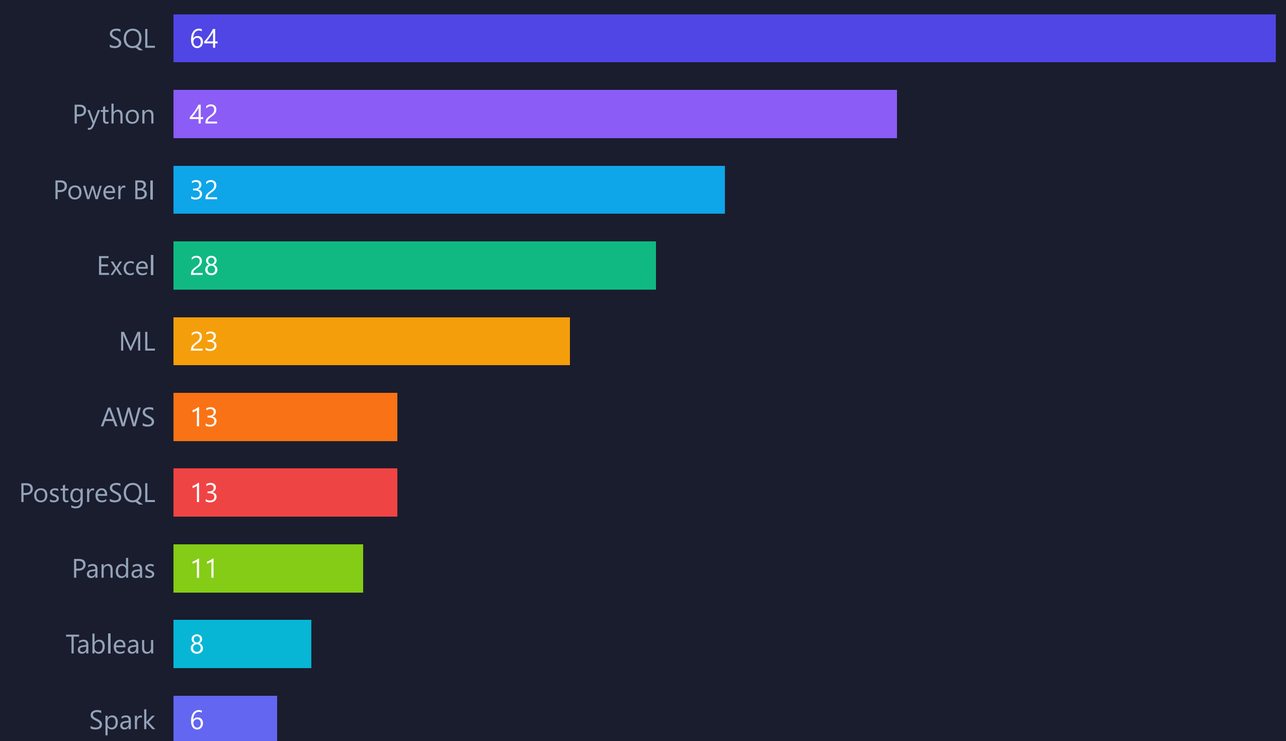
Top 5 skills at a glance

Key findings: Data Analyst is the most in-demand role (179 postings), SQL is the #1 required skill (64 jobs), and 75% of companies don't disclose salary — making this market opaque for freshers.

Skills Intelligence — What Do Employers Actually Want?

Filter by role to see skill requirements change dynamically

Most in-demand skills across all analyst roles



Cloud skills demand

AWS leads cloud demand 13:1 over Azure in analyst roles

Skills by role type

SQL dominates across all roles

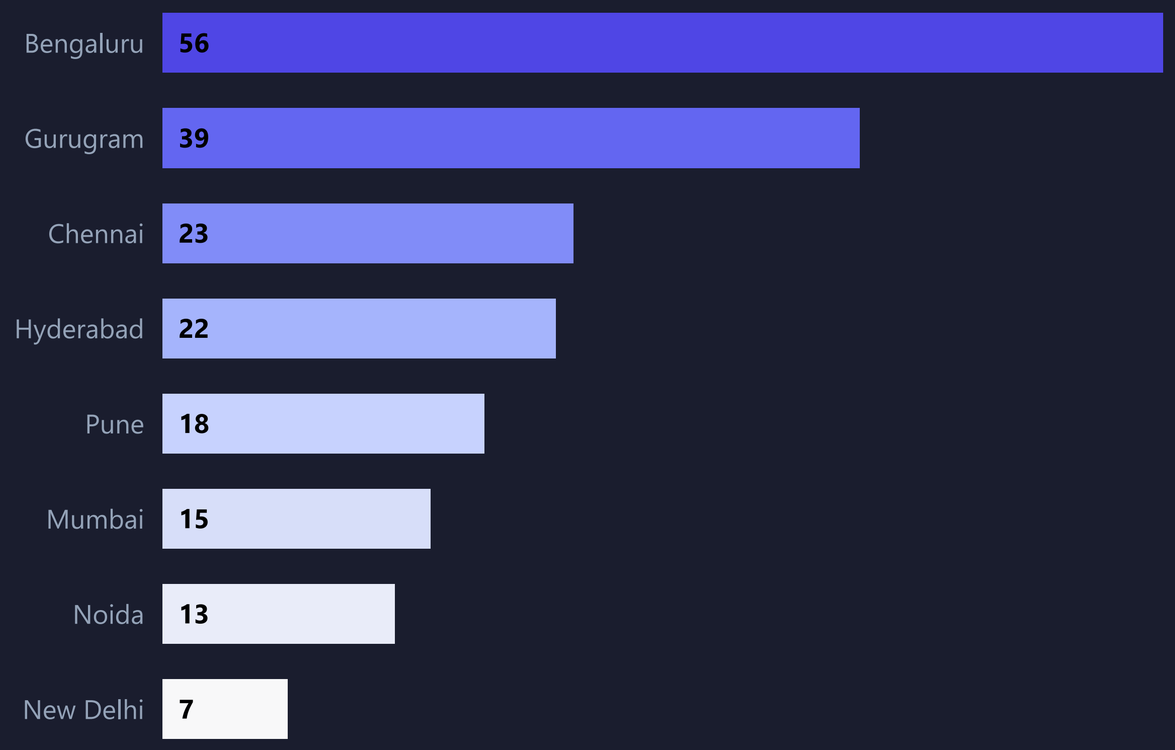
- **Data Analyst** → SQL, Python, Excel
- **Data Engineer** → SQL, Spark, AWS
- **BI Analyst** → Power BI, Tableau
- **Biz Analyst** → Excel, SQL, PowerPoint
- **AI/ML Analyst** → Python, ML, Pandas

Key findings: If you learn SQL + Python + Power BI, you cover the top 3 skills across ALL analyst categories. That combination appears in 138 out of 562 job postings — 24.5% of the entire dataset.

Location Intelligence — Where Should You Be Applying?

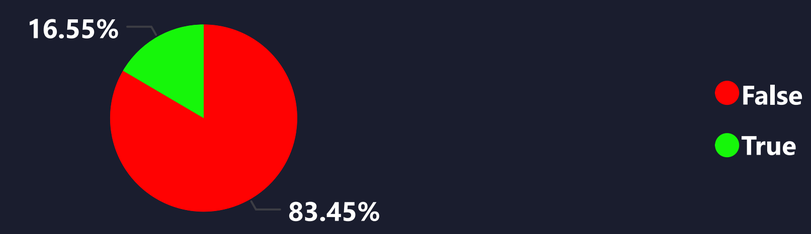
City-level breakdown · Top-hiring Companies · Remote availability

Top 10 hiring cities



Top 10 companies hiring analysts

Remote Availability



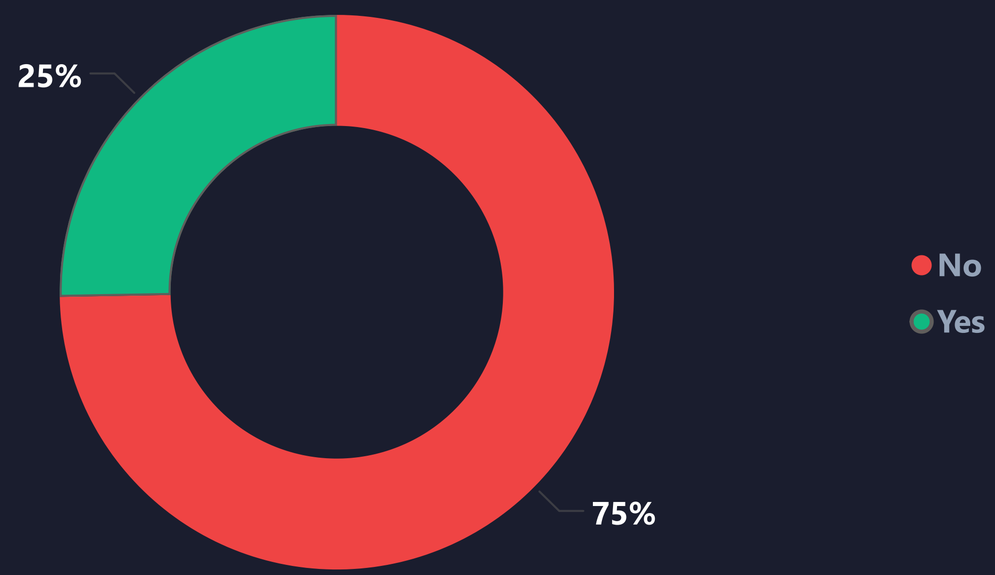
Key Findings: **Bengaluru dominates** with 56 postings — 10% of all analyst jobs. The top 5 cities (Bengaluru, Gurugram, Chennai, Hyderabad, Pune) together account for 62% of all postings.

Key Findings: **Remote jobs are rare** Only 16.55 % of postings offer remote work. If you're in Kota or a non-metro city, Bengaluru or Gurugram relocation gives you the highest probability of getting hired.

Salary Intelligence — The Transparency Problem

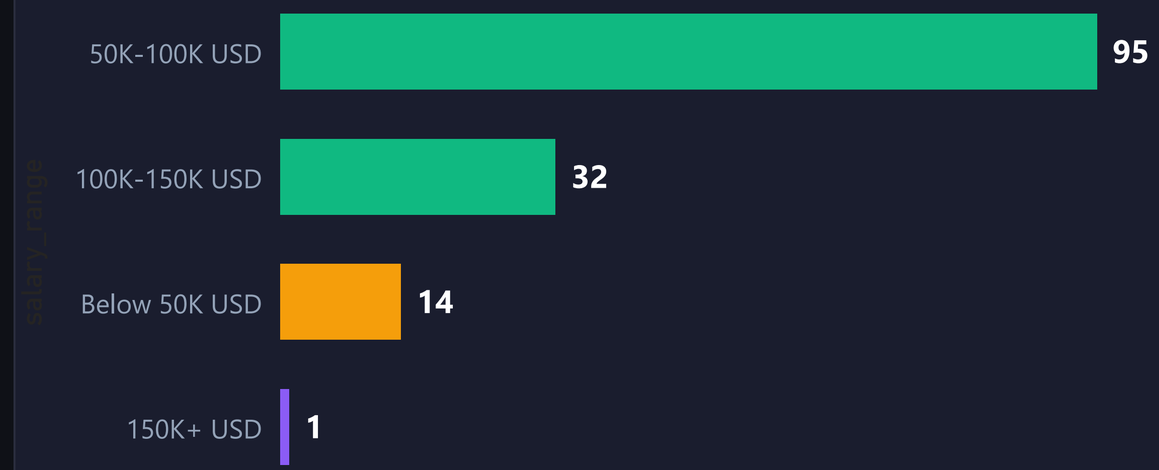
Only 142 of 562 postings disclose salary · A unique market insight

Salary transparency in Indian job market



75% of Indian analyst postings hide salary — making negotiation nearly impossible for freshers

Salary ranges (disclosed postings only)



Note: Based on 142 of 562 postings · USD (international roles included)

Which roles disclose salary more?

Key Findings: 3 in 4 analyst job postings in India don't disclose salary. This opacity disproportionately disadvantages freshers who lack market references to negotiate. Companies that do disclose tend to be international or US-based remote roles.

Experience Requirements — Is This Market Fresher-Friendly?

Data-backed answer to every fresher's biggest question

How much experience do employers want?

93% of postings don't specify experience — this is actually good news for freshers. It means companies aren't explicitly excluding you.

Opportunity: When experience isn't stated, apply anyway. 523 postings give you that chance.

Avg Experience by job_category

Watch Out: The 9 postings requiring 5+ years are senior roles. Skip these and focus on the 523 unspecified ones.

Demand across different roles: Business Analyst demands the most experience (5.5 yrs) while AI/ML is the most accessible technical role at just 2.0 years avg.

Hiring Momentum — Is the Market Growing?

Live data from March–April 2026 · Sourced from AWS RDS MySQL
